Platforms	Windows
Inspirations	Magicka, Magicmaker, Magicraft, Portal, Skyrim, Mage Arena

3. Overview

Magi-can is a linear puzzle game focusing on using combinations of the player's magical abilities in order to create unique and innovative puzzles. Initially spells will be given to the player standalone, so they can understand each individual spell's capabilities. Once they understand the mechanic of the spells, they will be given multiple at a time and tasked with using them together in order to complete more complex puzzles that require the usage of both and an interaction between their mechanics.

Spells will be used to activate switches, hold open doors, defeat enemies, and change the environment. The spells themselves are not isolated from the world around the player, they affect every aspect of the game in some way.

4. Story

a. Setting

Magi-can is set within a medieval-fantasy world. The game takes place within a dungeon of which the player is exploring in attempt to reach further floors and collect treasure.

b. Story

The player is a wizard exploring the dungeon in attempt to collect treasure at the end of the dungeon.

c. Player Character(s)

The player character is a nondescript wizard with the capability to cast multiple spells, however they require reagents for each spell to be cast.

5. Gameplay

a. Player objective

The player's aim is to complete each puzzle through the use of their spells and the environment, allowing them to access the stairwell to the next floor of the dungeon. At the end of the dungeon is a treasure chest that the players are aiming to obtain, signifying the end of the game.

b. Areas/Zones

The dungeon is the main zone of the game. It consists of stone brick walls, wooden furniture, pillars, barrels, tapestry, and water. Some areas may have a magical touch to them, containing objects that can float or water in strange formations.

c. Major Mechanics

The first spell introduced is the ice beam. A beam of ice is continuously fired from the player's point of view to the place they are looking. This beam has unique interactions with multiple objects. It can freeze water, put out or freeze fire, freeze enemies, and freeze launched projectiles.

The second spell introduces is the fireball. A ball of fire is launched from the player's position and moves slowly until it hits something, exploding upon contact. The fireball interacts uniquely with objects as well. It sets wooden objects on fire, steams water, destroys destructible objects, and can destroy enemies in a radius.

These mechanics can also interact with each other, such as melting frozen objects, freezing the fireball, or creating a fire to freeze.

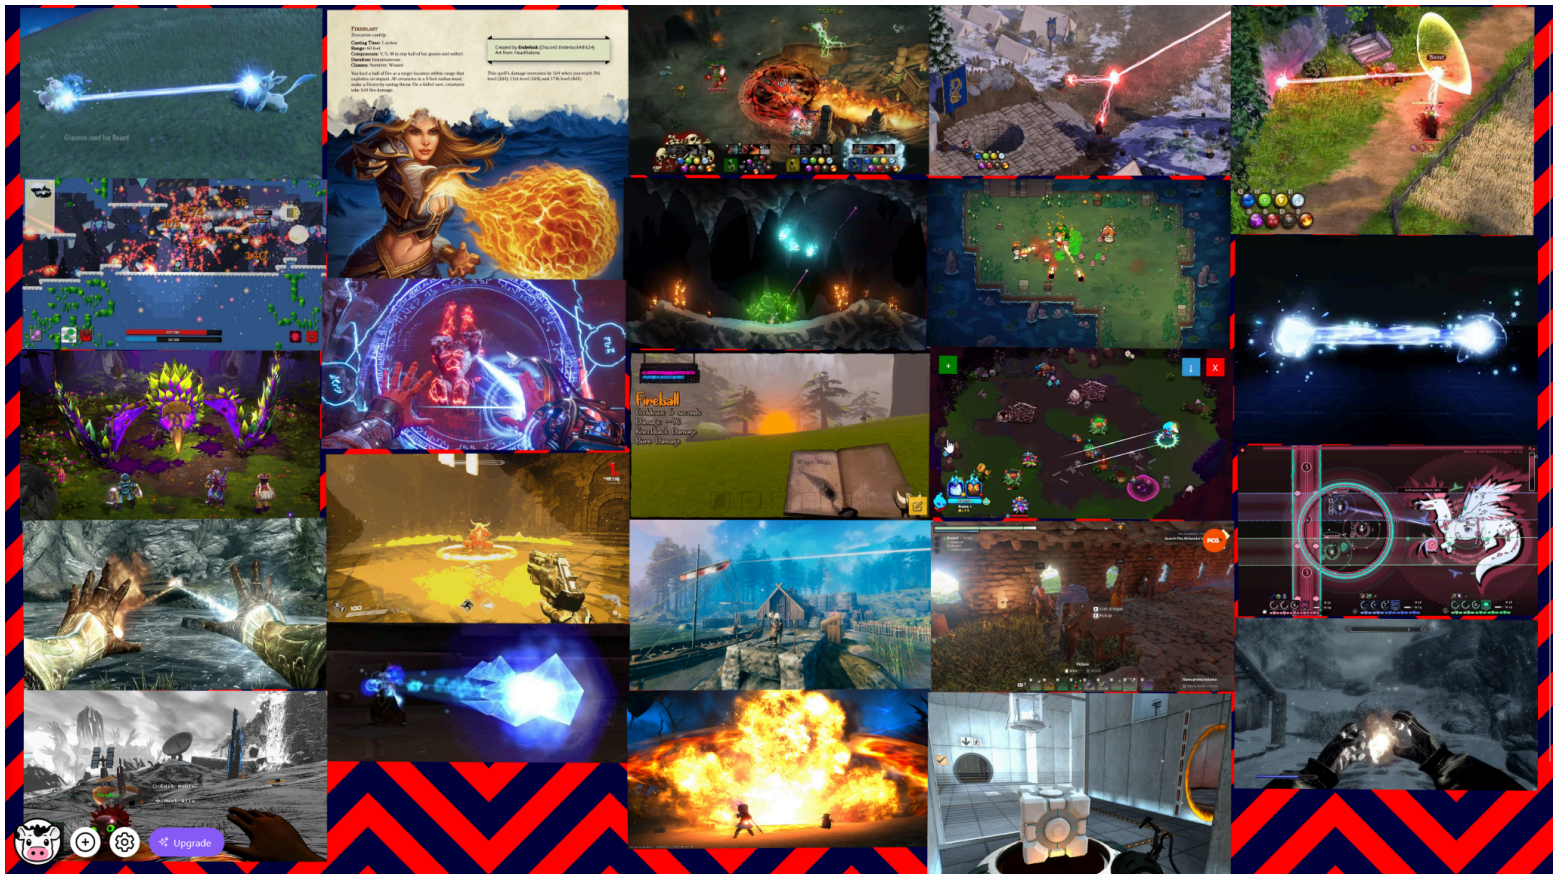

6. Artstyle

a. Style guideline

The style follows a medieval fantasy settings, however with a cartoon aspect. Colors are bright and distinct to allow for easy distinction between objects. Generally objects follow a grid-like pattern so that it is easy to create a path for the player and string together objects into individual dungeon rooms.

b. Mood Board

Generic Enemies

7. Music

a. Style Guideline

Music is simple and orchestral, focusing on instruments related to a medieval or fantasy theme. Ambient music will continuously play, with fanfares at the completion of major sections of puzzles.

b. Ambient Music

The ambient music is split into two sections. Puzzles for learning mechanics and generally containing simpler content will have a slower rhythm and lighter tone in order to create a relaxing environment to let the player learn. Harder puzzles will have faster rhythm and more engaging melodies that give the players a sense of action, engaging them to think more.

c. Fanfare

Successful and unsuccessful fanfare play upon completing levels and dying respectively. Successful fanfares contain brighter tones to indicate accomplishment, whereas unsuccessful fanfares contain darker tones for negativity.

d. Main Menu

Main Menu music is light-hearted and bright with a fast pace, trying to draw in the player with the anticipation of adventure. The Level Select has a different track to create variety and indicate the change in menu.

8. UI

a. HUD

The HUD is simple, showing which spell the player has selected and whether they are allowed to cast it at the moment. There are also inventory slots for keys or other objects to be placed.

b. Menus

b.1. The Main Menu

The Main Menu contains the ability to start the game, select a specific level depending on completion, adjust simple settings, and exit the game.

b.2. Level Select

The Level Select will allow the player to specifically enter and replay any level, which will then take them back to the level select when exited or completed.

9. Technical Elements

a. Game Engine

The engine used is Unity 6000.3.X.

b. Programming Languages, Libraries, and Frameworks

The programming language is C#.
